To Our Friends and Friends To Be

For years past we have given our particular attention to the culture of strawberries. We have propagated several and improved on others and done what we could with our selecting and breeding up methods to insure our customers value received for every penny invested. We realize that our future entirely depends upon doing justice to our customers and our many friends who have trusted us with their orders in the past will testify that we used great pains to have our stock true to name and precisely as represented as our own special crop for market is strawberries, and we make it a practice of first thoroughly testing all varieties that we wish to fruit and recommend, and should they prove inferior to fruit for profit, you will not find them

bearing our stamp of approval. Yet it should be remembered that while some varieties do well in almost any soil there are other good varieties that will not, and we consider it an injustice to any new variety that shows some good qualities to fruit it one season only and then condemn it. A difference of the condition of the soil and weather compared one year with another will cause a difference in the quality of berries. Therefore we think it a wise plan to try a few varieties each year, and then you will know just what does best in your soil. Thanking you for your liberal patronage during past seasons and trusting to merit your future orders, we remain

Yours truly,
J. T. GARRISON & SONS

INSTRUCTIONS

TERMS, cash with order; but orders will be booked if one-fourth value is enclosed, the remainder to be sent before shipment. C. O. D. orders require one-fourth value with the order. Send remittance at our risk by post-office order, express money order, bank draft or registered letter. Stamps taken for parts of a dollar.

CLAIMS, if any, must be made in 5 days so that mistakes, should any have been made, may be promptly corrected. We take great pains to avoid mistakes, but should any error have been made, please notify us of the fact at once. We will not be held responsible for plants that are left around the station or express office, nor for damage caused by floods, droughts, insects, frosts, etc., which we cannot control.

ORDERS should be sent in just as soon as possible after receiving this catalogue, as we may run short and early set plants do better.

TIME OF SHIPMENT. From the time you receive this catalogue to May 15. By far the larger part of our shipments are made during March and April.

TRUE TO NAME. While we use every precaution to have all plants true to name (and we believe we come as near doing this as anyone in the business) we will not be responsible for any sum greater than the cost of the stock, should any prove otherwise than as represented.

GUARANTEE. We guarantee plants ordered by mail or express to reach customers in good condition when promptly taken from the express office and opened at once.

AT PURCHASER'S RISK. Plants shipped by freight will be at purchaser's risk, and all plants shipped after May 15 will be packed and shipped in best condition possible, but always at purchaser's risk.

PACKING. We make no charges for boxing or packing at rates quoted in this catalogue. Everything is delivered f. o. b. trains at rates named.

PRICES include the packing and the package.

NOTE—To visitors who wish to call on us, we wish to notify them that we have bought another farm and changed our residence to Carl's Corner, on the road leading from Bridgeton to Vineland, which is two miles from Bridgeton.

Strawberry Plants for 1917

Our Leader

CAMPBELL'S EARLY

The greatest of all Early Strawberries

The old saying, "the early bird gets the worm," is as true today as it ever was. Plant Campbell's Early the coming season and you will get two worms. **EVENTUALLY YOU WILL PLANT THEM, AND TO START NOW WILL PUT YOU AHEAD.**

Its earliness, size, color, flavor, firmness, yield and bed making qualities will establish a reputation for Campbells—better than any early variety we have ever seen. Not a single good point lacking to put it in a class strictly by itself as the leading money maker.

Every berry a topper, every one a shipper, and every one a seller. The last picking of Campbells will produce you larger, better berries than the first picking of almost any other early variety.

Campbell's Early originated in Cumberland County, Southern New Jersey, and hails from the same community where Old Gandy originated and you may expect Campbells purchased from us to be Campbells. We have tested and tried them thoroughly before offering them to our customers and feel they will clear you more profit than any early berry you have ever grown or seen grown.

Don't fail to read what leading Farm Corporations, Bankers, Farmers and shippers have to say regarding its merits. While the price may seem a little high, please remember that you will get more in value received. The extreme dry weather that we have experienced through our territory this season, however, makes it necessary for us to ask more than we would have asked under normal conditions. At the same time we will never undertake to sell Campbell's plants at low prices, for the fruit pays too well to make it advisable to sell on a par with other later fruiting varieties.

Every grower knows that while the late varieties have in the past paid the highest net returns on the investment, that times have greatly changed, and that to get the biggest returns from the strawberry crop one must have early berries also, the earlier the better.

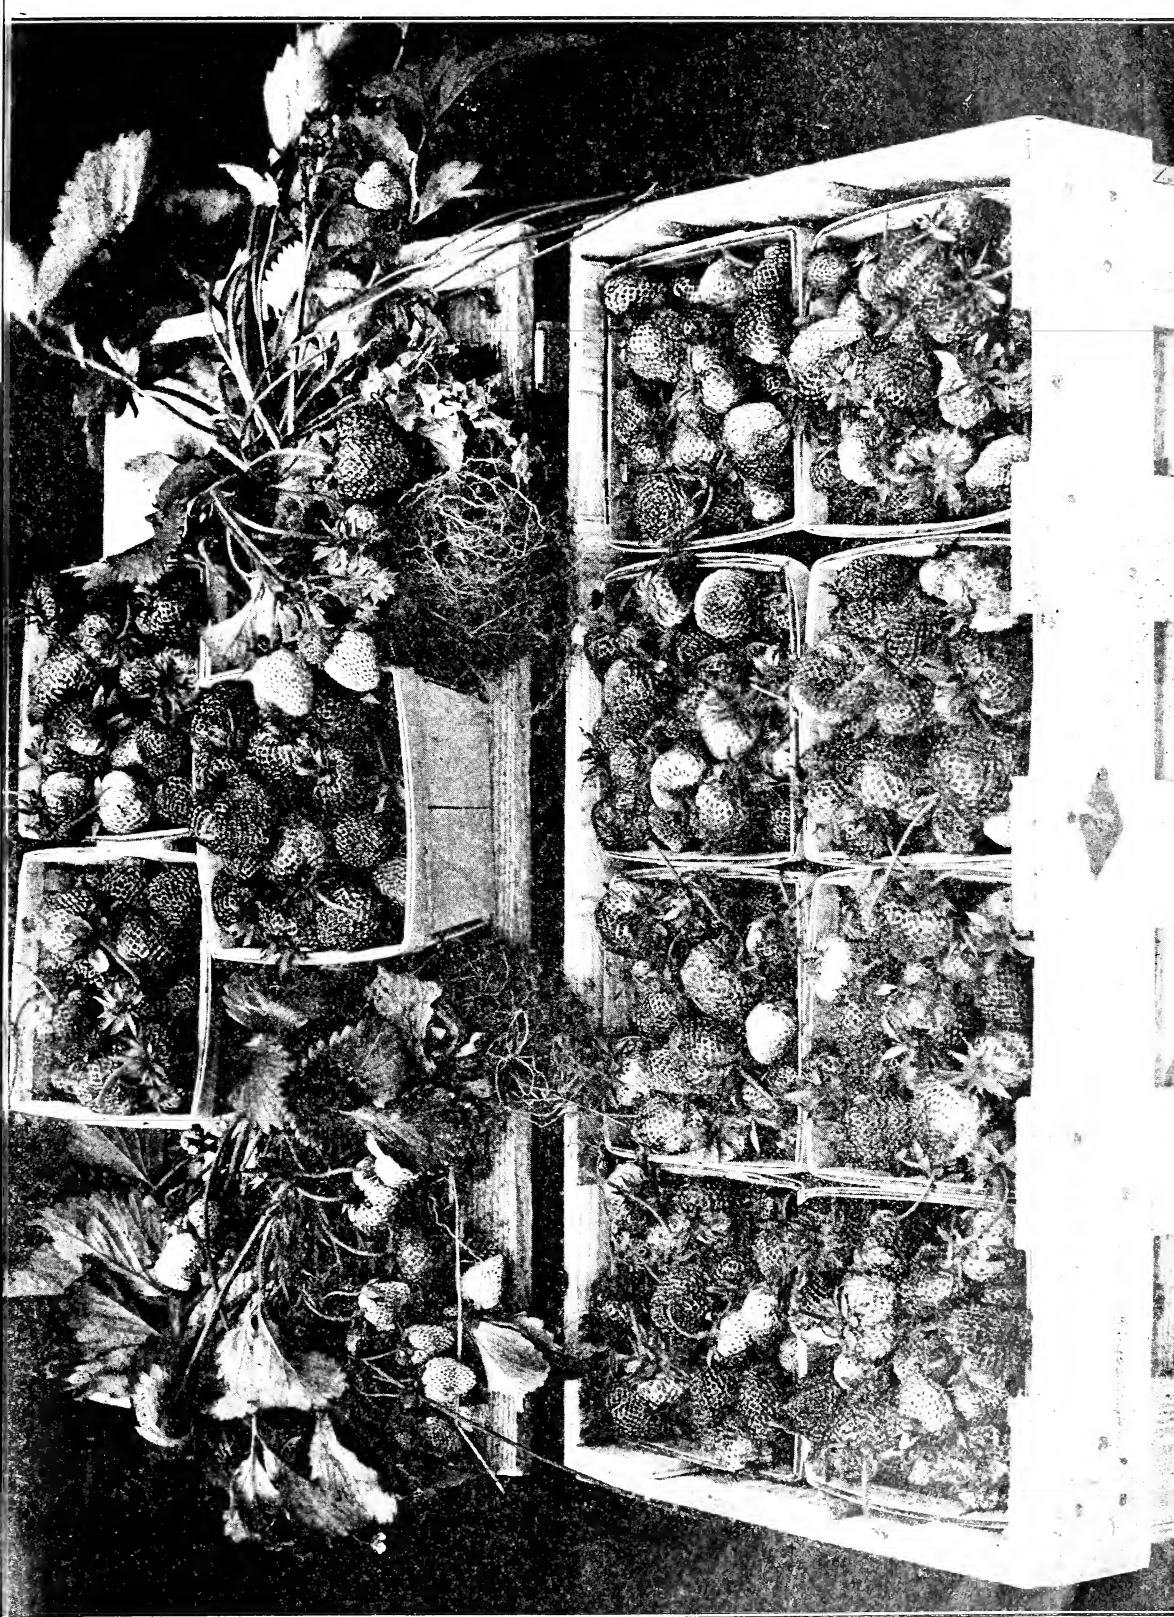

Campbell's Early will more than fill the bill for large returns, and its earliness combined with every good quality that a strawberry needs to bring the desired results will make the outlay for plants seem small indeed as against the profits received from the crop.

Don't be afraid that a change of soil may change the results—while we admit that some varieties have proven worthless on other than their native soil they were without exception weak on some point that a change of soil and climate further weakened, and made unfit for continuance. Please remember that "Campbell's" hasn't a single weak point, and their hardiness will insure them against either change of soil or climate.

See cut of Campbell's Early on next page. By noting berries showing white, which were picked green, you will see how surely they all grow to full size when ripe. Also see box of berries on front cover page, which is Campbell's Early.

DESCRIPTION OF CAMPBELL'S EARLY

Who wouldn't grow for market a strawberry better than Old Gandy, with four times Gandy's yield, holding its size better than almost any variety we have ever seen? Think of it, coming in earlier than Michael's Early, Excelsior, Fairfield or Klondike, on a clean market, at the highest price for the season. We have tried many years for a berry of this sort and had given up finding one to satisfactorily fill the great need. Campbell's Early, however, has even more good points than we had pictured. Campbell's Early comes in ahead of them all, growing from such large, healthy plants with a light green, waxy, upright foliage protecting the great crop of large, beautiful, rich, red berries. They have a beautiful green calyx and come second to none for flavor, large as Gandy or Chesapeake and more prolific

than either. One of the most wonderful features of Campbell's Early is that practically all grow to full size with no knot-ty, ill-shaped berries, but unlike Gandy's and some others, they ripen perfectly all over with no green ends.

They are fine bed makers, have perfect blossoms, will retain their firmness in carrying to distant markets. For further information advise that the first Jersey berries received at the Philadelphia market last season were Campbell's Early. Shipped May 18. These brought a fancy price and in our local market—Bridgeton—where the farmers would bring in their first picking of a dozen quarts or so of Michael's Early or some other variety you could find full crates of Campbells at any dealers marked up at big prices. If the smaller berries were offered at a much smaller price they would be lucky if they sold, as the dealers would tell you they had already engaged Campbells for tomorrow morning. We feel that this berry will be a big feature in our future plant business, for instance, you will have friends visiting you who are berry growers and they are walking with you through your berry fields, and you come to the Campbell's patch. "What is this?" "That is the Campbell's Early." "Where did you get

it?" "From J. T. Garrison & Sons, of New Jersey." Your visitor will certainly be so interested as to ask you for some of the plants, and if you should not feel like sparing them we would be liable to get their order. But there is more than just the order that interests us. We would have the name of the customer added to our list, which we always appreciate. Hence the big feature in our future plant business. This will be one of the varieties that the big buyers from Boston, New York and other cities will buy and bid fast on them while following up the line of berry section from the south to the north, buying heavy for long distance shipments on account of their beautiful appearance and great shipping quality.

If you want the earliest and best berry to offer your trade you will plant Campbell's Early. We can supply more than two million plants of this variety and expect to plant several acres of them for our own early market. There will be an unprecedented demand, however, for Campbell's Early and New Jersey alone will plant as many as she can get hold of. Therefore would advise early ordering to avoid being disappointed. For prices, see regular price list in back part of catalogue.

BRIDGETON, N. J., _____ October 12th, _____ 1916.

J. T. Garrison & Son,
Bridgeton, N. J.
Gentlemen:-

In answer to your inquiry regarding what we think of the Campbell's Early strawberry we would state that, while we have not grown it very extensively, we have watched it very carefully for two years and regard it as the best early variety that we know of at the present time.

It is a good cropper, an excellent shipper, and has a better flavor than the usual early varieties.

This is the only early variety that we expect to plant for early berries in the future.

Very truly yours,

Seabrook Farms Co.

E. F. Seabrook
President.

J. T. Garrison & Sons,
Woodstown, N. J.

Gentlemen:-

I am answering your letter of
Oct. 16th.

My experience with the Campbell
Early Berry is that it is a good eating
berry, a wonderful cropper and one of the
earliest varieties in our market. I think
a great deal of the berry and would not wish
to be without it.

Yours very truly,

JSW/M

Messrs. W. T. Garrison & Son,
Bridgeton, N. J., RD#7.

Gentlemen:-

We believe that Campbell's Early Strawberry is
a valuable variety. It is much earlier than most of the
strawberries grown in our County and at the same time
shows many of the excellent qualities of the later types.
For an early berry, it is unusually large in size, of
an attractive color and excellent quality. Since the
time of its introduction it has been profitable for growers
and shippers alike. We have added this to the list of
commercial varieties for our own production.

Yours very truly,

MINCH BROS.

Mr Warren Garrison

Dear Sir

It is with pleasure that I can recommend the
Campbells Early Strawberry, those wishing to grow the
Strawberry for profit can not make any mistake in
selecting the Campbells Early a great producer and
a delicious berry

Very Truly
S. S. Gitchner

Newport, N. J.,
September, 1916

Mr. Garrison & Sons:—

Dear Sir:

Yours of September 25th at hand and
contents duly noted. Will say that I am
not much on the writing of testimonials
but I cannot lose an opportunity of giv-
ing the Campbell's Berry a good word. I
have fruited the Campbell variety and

feel that all I can say about the good
qualities of this berry is far below what
it deserves. I will mention some of its
superior qualities over others. It is the
earliest, hardiest, of good flavor and
most prolific berry that I have ever
grown, and wish that I had a larger
acreage of Campbell's Early on my farm.

Yours truly,
ELMER BOWE

New Jersey.

Gentlemen:

Re - "Campbells" Early Strawberry.

We are pleased to recommend "Campbells" Early to all Strawberry
Growers as a money maker. Its earliness, firmness, size, yield,
and handsome color make it of exceptional value to both Farmer, and
Shipper.

In our Strawberry sections there will be more "Campbells"
planted the coming season than all other varieties combined.

Yours very truly,

SOUTH JERSEY FARMERS' EXCHANGE.

BRIDGE TON 381-2

Fairton, N. J., Oct 18 1916

Mr. Warren Garrison
Dear Sir

I have been very
much interested in the Campbell
Early Strawberry for last two
years. The plant is a vigorous
grower making a good bed and
producing heavy crop. The
Berry is by far best Early
Berry grown in this section
and has paid the grower
more profit than any variety
grown here during last
two years.

Very Truly
W. H. Thompson

Newport, N. J.

Messrs. J. T. Garrison & Sons,
Woodstown, N. J.:—
Gentlemen:

As to the Campbell Early Strawberry
I have fruited it and consider it the
largest and earliest I have ever saw. Its
firmness, heavy yield and bed making
qualities, together with its extra earli-
ness, makes it the best ever. No one
can make any mistake in planting the
Campbells.

Yours truly,

R. C. SHAW

Newport, N. J.,

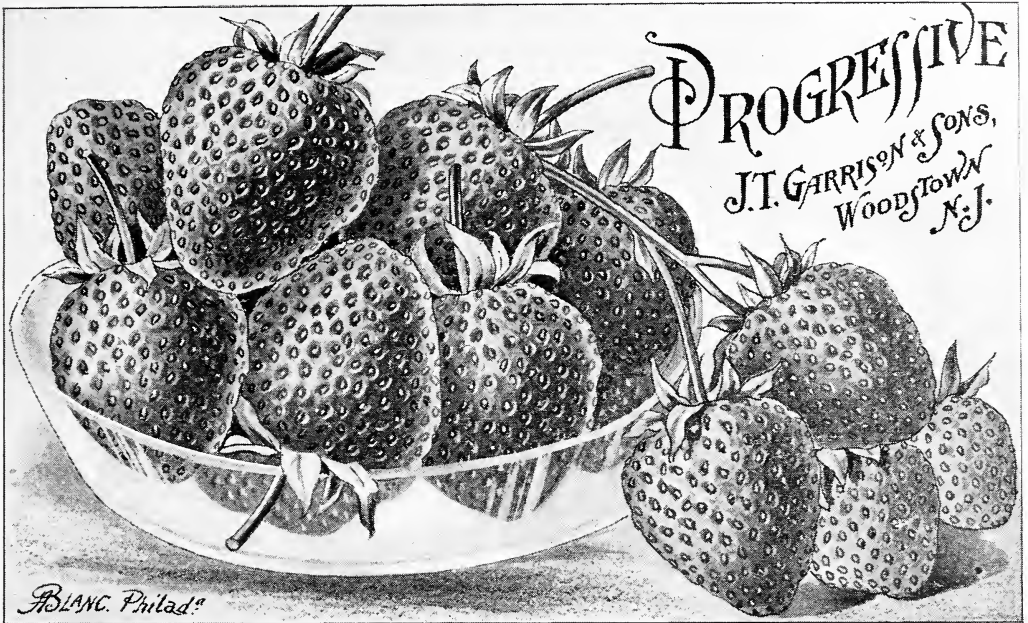

October 9, 1916

J. T. Garrison & Sons,
Woodstown, N. J.:—
Gentlemen:

The Campbell's Early will be my lead-
ing from now on. It is a firm, grand
seller, and the earliest on the market.
They are a very hardy plant and easy to
bed. Anyone that grows strawberries
will make a mistake that doesn't grow
the Campbell's Early.

Yours respectfully,

ALBERT PAGE

PROGRESSIVE

The Great Yielding Everbearing Variety

We gave a short description of Progressive in our 1916 Catalogue, but after fruiting it another season, have come to the conclusion that we did not do it justice. We did not say just half enough about it. While not quite as large as the Superb it is a great cropper. Plants set in early spring will commence fruiting in June and keep right on, with no let up, and set so heavy with fruit, mother plant and runners, that it will commit suicide if allowed to have its way. So under the circumstances it needs a "guardian" that will take off the blossoms and keep taking them off every 8 or ten days, until the last of July. Then you will have a fine bed of plants in good healthy condition that are ready to get down to business and keep you picking berries continually for three months. You will pick a good many crates of berries from one acre of ground that should sell from 25 to 50 cents per quart in a good market, providing you grow them right; that means, taking off the blossoms at the right time, hoe and cultivate at the right time and have them on good rich land: which any berry should have. It is October 20th, 1916, and we are writ-

ing up our 1917 Catalogue, and at the same time we are picking and marketing Fall bearing strawberries. So you see we do not have to wait until next summer, but can gather our second crop from these same plants next June. Were you here we would take you back to our field of Progressive, the rows running east and west, and get you to walk along the south side of the rows. Looking north with the sun shining on them you would see lots of beautiful, rich, red, fine flavored berries on both mother and runner plants; and a berry that is very firm and good shipper. If you haven't any of the fall berries order now, whether you have a garden plot or a large farm. It is a great pleasure to show them to your friends and also a pleasure to receive from \$7 to \$10 for a 32 quart crate. We have received \$14.04 per 32 qt. crate clear of shipping expenses.

Last season we could have sold 250,000 more Progressive than we had. Turned down lots of late orders, large and small, and although we have a good many more plants this season, we expect to run short late in the season, as this berry is becoming better known and the demand increases for these plants.

The Largest Everbearing Strawberry is
Superb

SUPERB, FALL BEARING

This variety so much resembles the Chesapeake in appearance that you can hardly tell them apart and is a good plant maker providing you keep blossoms off until mid-summer, which will enable you to get a fall crop the same season you plant them and we are sure they are the largest berries of the fall

bearing varieties. We picked them last season from the first of September and sold them in our local market at 20c and 25c per quart, until September 25, when we began shipping to Brooklyn, N. Y., until November 2, and also picked 8 or 10 days longer for our own use. One of the firms that we shipped to were Ferring Brothers, Brooklyn, N. Y. We will list for you the date of shipments, number of quarts, prices and money cleared each shipment.

FERRING BROS., Brooklyn, N. Y.

Sold for T. B. GARRISON

Sept. 25—32	qts. S. B. at 19c,	\$ 6.08	Check \$ 5.12

Nov. 2—9	" " 20c,	1.80	" 1.36

No. Qts. 185

Price \$64.38 Clear \$55.53

Expenses on each shipment were 26c freight, 10c cartage, and 10 per cent-commission, with the exception of the last 9 quarts, with the freight 16c. We have all these bills on file and any of our customers who call on us and will mention it, we will gladly show each original bill. These plants were set on

our farm last April, 1915, and they would be this coming season in June one of the greatest croppers and best paying varieties off of the same vines that we picked this fall that we have in our list. We have had this experience with Superb. Keep blossoms off so that they won't commence to ripen until Septem-

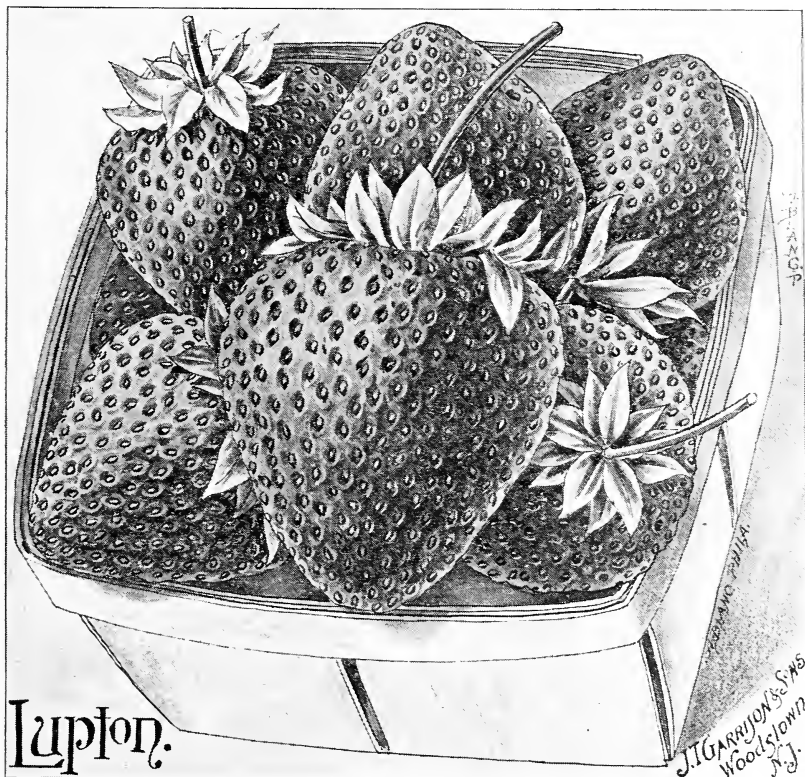

ber. We did not have near enough plants last season, and don't expect to this, for late orders, so let them come just as soon as possible. Don't believe you can beat our prices.

P. S.—The reason of the difference

The above description is of Superb for the fall of 1915. We commenced shipping this season September 11, and are still shipping up to the present time, October 19, and will pick until the ground freezes. We cannot give full record of 1916 shipments, as some of the bills have been misplaced, but we have a larger field of fall bearing plants and have sent several more crates in 1916 than in 1915. There was such a demand for the plants last season that we run out of plants before the season was over and turned down lots of late orders of from 100 to 50,000 plants each. We lost the sale of thousands of plants because we did not have them.

and change of price from 50c per qt. to 20c of the last two shipments is that the weather had become so cold that it was impossible for the berries to ripen within a quarter inch of the cap. There had already been frosts.

We realize that these fall bearing varieties have been distributed a few here and there all over the U. S. Enough people have seen them who will tell others who have not that they are no fake. After people find out, why should there not be a demand for them. Make life a little more worth living by planting some of the Superb and Progressive so that you may enjoy the novelty of having strawberries in September, October and November, and have the pleasure when you sit down to your meals or your friends come to see you of passing around the strawberries; and this is not all, for your bank account should increase at the same time.

LUPTON One of the Firmest Berries on Earth

As Dan Patch and other great race horses have attracted the attention of

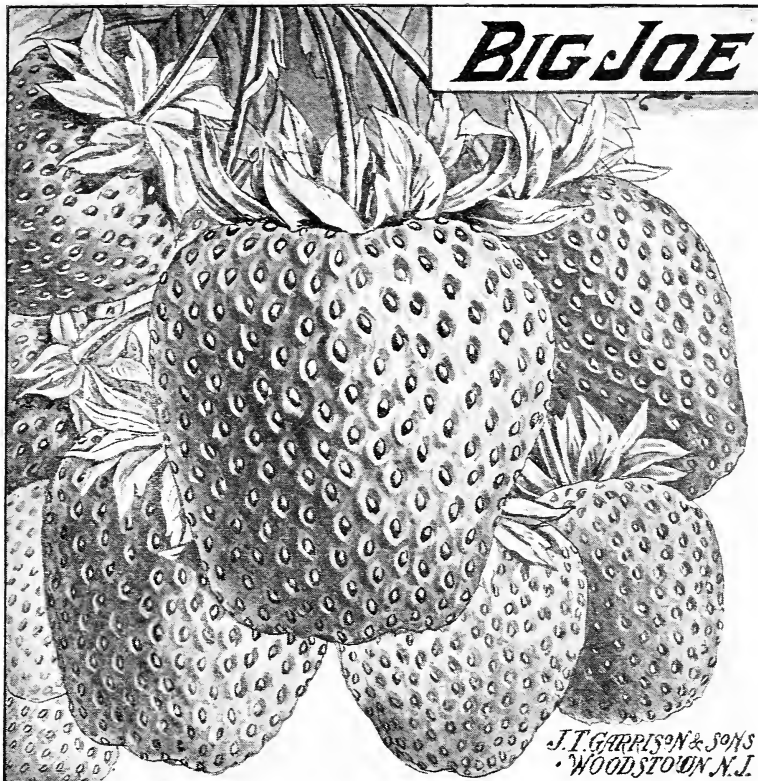

the world's greatest horsemen and the fine bred registered cattle the cattlemen, and Lady Eglantine, the poultry fancier, so we believe without the shadow of a doubt the "Lupton" when seen either on the market or in the field, will cause the small strawberry grower and the big commercial growers of the country to (Stop) (Look) and (Wonder.) As we did two years ago in the Originator's field of Lupton. Such a beautiful scene of great, large, brilliant, red, perfectly ripened, smooth surfaced, glossy berries, with a large leafy calyx that is a model. And such a large crop of late berries growing from large, strong, healthy, luxuriant foliage plants. In regards to its firmness or shipping qualities we believe it to be without an equal. We brought a few of the Lupton home with us, setting on the floor of the auto, and they got quite a shake-up. Yet after this rough usage they kept in a cool cellar for a week as perfect and smooth looking as when we picked them. Not a spot to be found. We repeat we do not believe it to have an equal for shipping. It has less juice in it than most varieties. Practically every blossom grows a perfect, fancy berry that sells at the top price. Our faith is so great in the Lupton that we want you to do

us the favor of planting Lupton along with the most profitable late varieties that you know of, treat all alike, and see if the Lupton will back us up in our description, and show you that we have not overestimated it. Although this is only the second season we have offered the Lupton and we ought to get \$15 per 1000 for them, we are going to let you have them much cheaper. We are anxious to get them distributed to a large number of berry growers, and will come nearer doing so by making the price lower.

We already know there will be several acres of the Lupton planted in South Jersey this spring and feel quite sure those who are late in ordering are liable to be disappointed. Do not fail to give this your especial attention.

AMANDA

After fruiting the Amanda the second season we were certainly pleased with it. They produced a fine crop of extremely large berries of good quality, and sold for us in New York Market at fancy prices. The plants are wonderfully strong, healthy growers, and will be especially noticed for that particular feature.

BIG JOE

Exceedingly Fancy

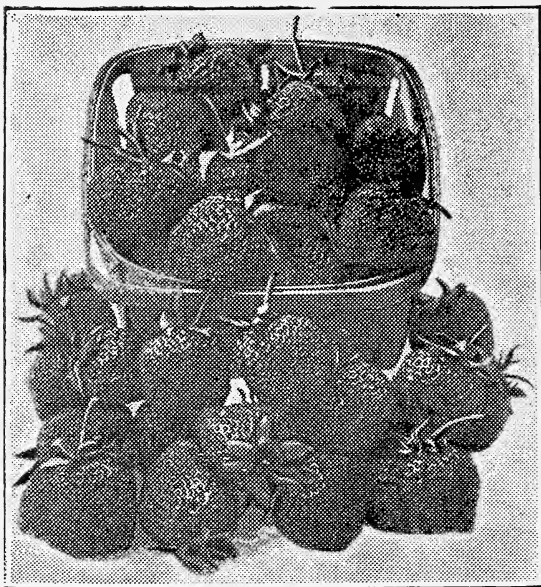

Fruit large to very large, and continues large to the end of the season, firm; in form it is obtuse conical and very uniform in size; red with red flesh; quality good. Very fancy.

Season, medium to late. Plant is unusually vigorous and long lived, and foliage is clean and healthy. Flower perfect, productive and carries its fruit up well. We had such a call for Big Joe last season from different parts of the country where we had sent out plants two and three years before, that we did not have anywhere near enough plants to supply the trade last season and don't

expect to this. Order as soon as possible if you want them.

BELL

This variety is one of the greatest croppers in the list of very large berries and has been grown extensively in this locality, probably more so on account of the canneries preferring them to other varieties, as the juice is such a deep, rich and beautiful red in color, and the berry retains its shape better after being cooked than most varieties. The growers here generally ship the first half of crop to market and take balance to can house. Would advise trial.

CHESAPEAKE

CHESAPEAKE

The Late Money Maker

The berries are extra large and fine flavored, deep brilliant red in color, ripen all over, and glossy in appearance. In fact, the very last picking may be considered fancy, being the sort that will sell readily in a glutted market. The plants are great big fellows with great thick roots, fine upright foliage, very large leaves, almost round, and dark green in color. While they are as healthy a variety as we have on our farms, it is not their nature to bed very thick, so we advise setting plants one-third closer than extra good bed making varieties. We sold an order last season to one customer of 200,000 who had been fruiting Chesapeake 4 or 5 years, and knew he was taking no chances, as experience is the best teacher, and our sales increase each year on Chesapeake and we set more of them each year, but have always sold out before the season was over. Be sure and order some Chesapeake.

CHIPMAN

It succeeds on both light and heavy soil. The fruit is large to very large, with green caps of even size and shape. It begins to ripen four or five days earlier than the Bubach, and being very firm and retaining its glossy red color

well after taking from the vines, all combined makes it a valuable market variety, whether local or distant.

The plants are strong, upright in growth, large and healthy, with tall, broad, bright gloss-green foliage, which has never shown any sign of rust or disease. It has strong staminate blossoms and is a good variety to plant with pistillate sorts.

COLLINS

Introduced two years ago by Mr. Whitten, of Michigan, who says, "In offering this new strawberry at this time I feel that I have something that will be an acquisition to our list of market sorts and is also of such superior quality that the amateur will be delighted with it. A seedling of the Bederwood, but is of much stronger growth, making a good row, but is not the excessive runner that Bederwood is; the foliage stands up very strong and rank, of rich dark green color, and is free from rust or disease. The fruit is quite different from Bederwood, which is light colored, and not of the richest quality, while Collins is of a dark red color from surface to centre, and of rich flavor, ripening evenly without green tips. The texture is something of the Bederwood type and ripe berries will remain of the vines several

days without souring. Mid-season to very late."

While we have not fruited the Collins it has proved itself as recommended in the plant growth.

DARLINGTON

Grows a fine large plant, making good bed, large size, beautiful deep red, fine quality berries that will sell to the best of your customers at best prices and the next day they will ask for more.

Early

Ozark

EARLY OZARK (Very Productive)

One of the very earliest in the list, growing a rank, luxuriant, upright foliage producing a great crop of large dark red berries, it is a little tart, and is a seedling of Excelsior crossed with Aroma. The demand is greater each year for plants. Order at once

EARLY JERSEY GIANT

Originated by Dr. Walter Van Fleet of New Jersey. We have never fruited this variety, so will describe it as recommended to us. The berries are claimed to be large, brilliant, scarlet. Mild flavor that has a delicious wild strawberry flavor, very large blossom, a large green cap making the berries very fancy and attractive. One Burlington Co., N. J., farmer claimed to pick first ripe berries May 12, which is very early for N. J. We have a fine lot of these plants, although the quantity is limited and we would advise early ordering.

EKEY

Grows a large plant which shows up great in field. Good cropper of large, fancy berries, good shipper and fine quality.

FIRST QUALITY

Great cropper, beautiful color medium to large in size of berries. Could not be even in shape if moulded. The more you eat the more you want. A new and already standard variety where it has been tried.

FENDALL

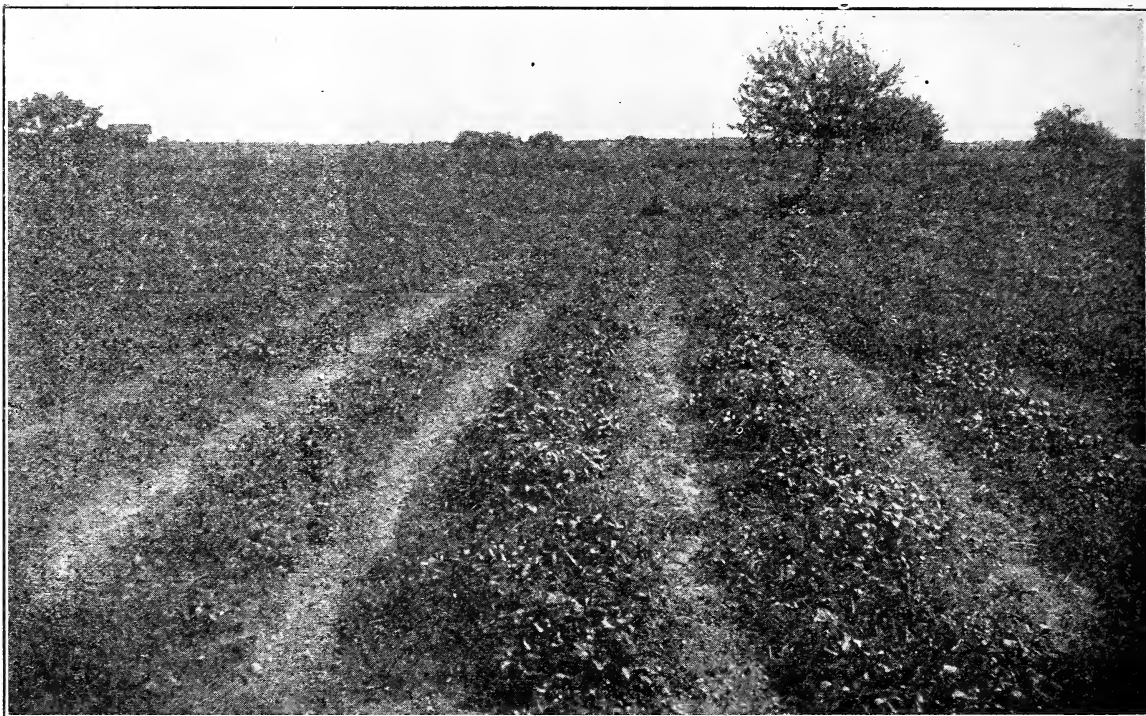

A tremendous cropper of large, light red berries growing on a long fruit stem, good quality and medium firm.

FRANCIS E. WILLARD

Originated by Mr. Miller of Ohio, and introduced by the M. Crawford Co. We have never fruited the Willard, but if

the berries are anything in comparison to the great stalky plants we have growing, they surely are worthy of their name. They are wonderful. The berries are claimed to be about the size and shape of eggs. A beautiful red in color, with red flesh and excellent quality. We understand that the Crawford Co., after receiving a quart of the "Willard" by

express from Mr. Miller, were so favorably impressed that they went to Mr. Miller's and purchased the whole stock. Now, as we said before, we have not fruited this berry, but believe it to be a money maker and intend to set heavy, ourselves, this coming season, and hope our customers will give it a trial.

GARRISON'S GANDY PLANTS

GANDY

The old standard late variety that sells in the market in time of glut when some others fail. Too well known to need lengthy description. We have a fine stock of Gandy plants.

FAIRDALE GIANT

Anyone who raises berries for home, market, or their own use should have Fairdale Giants. Large to very large, sweet and mild flavor, medium firm. Great big plant, medium bed maker.

GOLD DOLLAR

Above medium in size, great cropper,

highly colored, red flesh, good flavor, even shape, nearly round. Splendid cropper and fine plant.

GRAND MARIE

Will keep several days, on the vine, after ripe, large firm berries, good quality dark, rich glossy red color. Healthy plant producer.

HUSTLER

As we sold every plant we had of the Hustler last spring and did not see them fruit we will have to give last year's description.

Another one we have not fruited. It is claimed that three quarts were taken to

the Reading Terminal market in Philadelphia and that fifteen different dealers looked at them, and all but one preferred them to any of the other varieties. It is claimed they will bring the highest price on any market.

HERITAGE

One of the very largest in the list, great cropper, dark red in color, medium firm, does not just suit us for long shipment, but we have known of large growers raising acres of them for Philadelphia market who hauled them a few miles to market with their own conveyance.

JOPP'S FAVORITE

This is another new one just lately introduced and originated with Mr. W. H. Jopp, of Maryland. As we have never fruited this berry we will quote the introducer's description.

"In 1914 I received a letter from a friend saying that Mr. Jopp was carrying the finest berries to that market he had

ever seen, and that I had better go see the fruit and buy the plants. When I went to see the berries I found they had been picking them about 12 days and that they were almost gone, but we went out to the patch and I saw some of the finest berries that I have ever seen. We soon picked a quart heaping full that had only 27 berries in it. Mr. Jopp had been selling the berries to private customers all season for 10 to 15 cents per quart when other varieties were bringing only 8 to 10 cents. I have never eaten better berries."

The plants are very large, with tall broad green waxy foliage; they have large, perfect blossoms, the fruit is very large and fancy, and is produced on large strong fruit stalks. Color bright glossy red, red to centre, firm and of extra quality. Late mid-season, to late. We have a nice lot of these plants and hope our customers will give it a trial.

We bought several new varieties last spring and we bought more of these than most of the others.

T. B. Garrison takes a hand in growing plants for you that grow a crop.

KELLOG'S PRIZE

This is a pistillate variety that is new to us and not fruited here yet, but according to reports through reliable sources from all over the country where it has been tried, it seems to be giving great satisfaction. One of the largest commercial growers in the country says he never saw anything to beat the Kellogg last season. The berries are claimed to be large and extra fancy, and lay in such piles around the plants that you would wonder how they could produce such an enormous amount of large fruit. This is another one that we ordered more of last spring than hardly any of the others. We had heard so many good reports that we had faith in, something seemed to say "this is the one you want." Probably it would pay you to have the same feeling. If you could see the fine plants they have made we are satisfied you would be tempted to give them a trial.

KELLOG'S PREMIER

A new variety lately introduced claimed to be early and to continue fruiting until the latest varieties are at their best, very productive of highly colored, fine quality berries. We have never fruited this variety, but believe it to be a good one and have a limited amount of fine plants. Had better order early.

LATE JERSEY GIANT

Another of Dr. Van Fleet's varieties. The latest of all strawberries and best late. It undoubtedly has Blood of Gandy in it, but is of superior quality. The berries are larger, more brilliant color and it is produced in greater numbers. Uniform large heart shape, smooth and glossy, firm and meaty. "I regard it as the most beautiful strawberry I have ever seen." (Introducer's description.) We have not fruited this variety, but

can say that our plants of the Late Jersey Giant are of extra large size, and have made a fine bed of healthy plants that are very attractive.

McALPINE

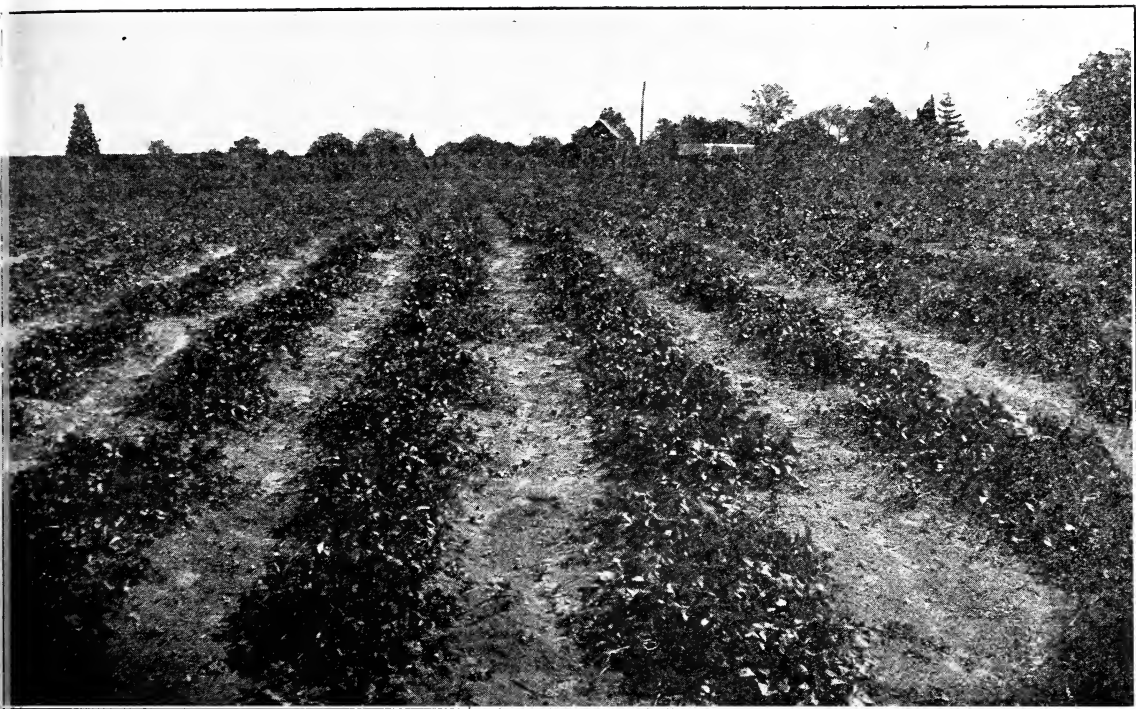

See cut of McAlpine Cluster of Berries on front cover page. This is a great berry and no doubt will become one of the Standard varieties after it is better known. After fruiting it last season we find it very productive of large, highly colored and very fancy berries, showing up well in the crate, and should bring first class price in any market. Great shippers and one of the best plant makers we have ever had in our lives. In fact, they are such persistent growers that we would advise setting plants one third further apart than the usual distance of plant setting. And we wish to call to your attention that W. O. & H. W. Davis, Commission Merchants, of New York City, who handle large quantities of fruit, claim they are as fine a berry as they had ever sold, and that one shipment they sold the McAlpine at 23 cents per quart wholesale. This ought to be convincing and we advise our customers to give it a trial and order early, as we do not expect to have enough to fill all late orders.

MASCOT

The berries are great, large, well colored, firm berries of good quality, growing a large healthy plant, and one that should please you for late.

MISSIONARY

Extensively grown in the South, great shipper, very productive, showing well in the package; good plant maker and early.

OREAM

Latest of the Late

Another field of Garrison's Plant of the Oream and the kind you may expect to receive if you give us your order. Although labor is at a premium, here we spare no expense in thorough cultivation at the proper time.

The Oream is a money maker. great big fellows coming in with the Gandy, lasting until after the Gandy is gone and excells them in cropping. Berries are exceedingly large and will stand up long after they are ripe. This variety has never failed us, regardless of weather conditions, and we have never yet had plants enough to supply all of the demand.

We believe those who are successful in growing the Gandy could increase their profits from one-third to one-half more by mixing the Gandy plants with the Oream. We would say, mix them half of each, which would produce a much greater crop, larger berries, and they would sell for fancy Gandies. We believe the Oream would improve the Gandy berries, also the fruiting capacity. It has always seemed to us that the Gandy is just half way between staminant and pistu-

late. If you will examine a Gandy blossom you will find there is insufficient pollen. Therefore our reason for mixing Oream to help pollenize the Gandy. We have tried this plan and last season a friend of ours saw us packing Gandy and asked us if they were Gandy, and we said, "yes." The answer was that they did not see how it was our Gandies were so much larger and nicer than theirs or any they had seen. We would advise trying a mixed patch of Oream and Gandy along side of a patch of pure Gandy and see which patch of equal size picks the most quarts, the largest berries and makes the most profit.

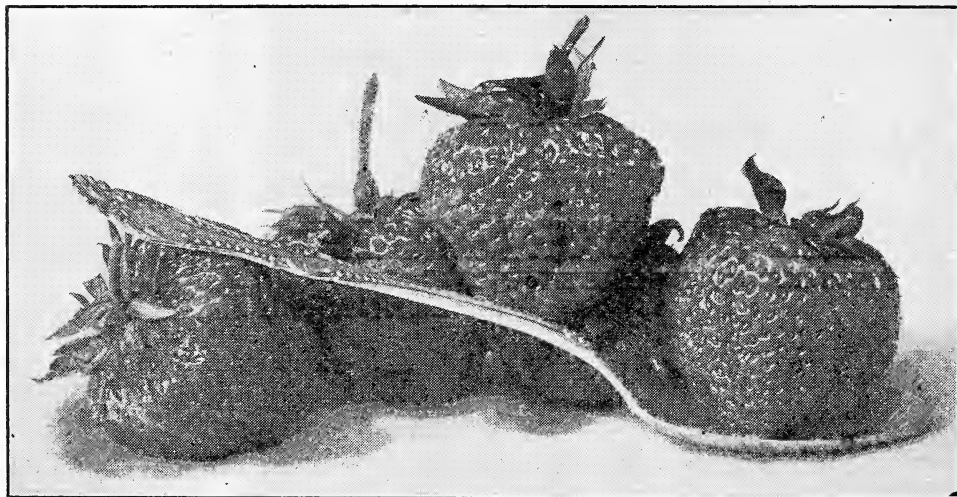

PAUL JONES

Wonderful production of beautiful colored, glossy berries, medium to large in size, firm, and one that the more we try it the better we like it.

REWASTICO

This is one of the most luxuriant, vigorous, with dark green foliage, plants, that we have on the farm. The berry is highly colored through and through. Tre-

mendous cropper of berries as uniform in shape as Chesapeake, and Mr. Allen claims they are the only competitor the Chesapeake has ever had. Our Rewastico are growing in our irrigation field and are certainly a fine lot of plants.

STEVENS

STEVEN'S LATE CHAMPION

We are the introducers of this famous strawberry that has made a record that has yet to be surpassed as a moneymaker when taken the country over. It is very large, bright color, a fine bed maker, a heavy yielder, fine foliage, with a good fruit stem. It has been tested on all kinds of soil and will grow successfully where any strawberry will grow.

Look at the price. Get your plants from the introducers.

TODD'S LATE CHAMPION

"Originated in Delaware, and is supposed to be a seedling of Sample or William Belt, as it was found near those varieties. It is one of the latest varieties I have ever fruited, and will produce as much fruit as any variety I have ever fruited. The plants are extra large, with tall dark green foliage. It makes splendid plant beds on any soil. The blossoms are pistulated and each plant produces several strong fruit stalks, which keeps fruit well off the ground, and it is well protected by the tall foliage. The fruit is large, of even size and shape. The color is a bright, glossy red. It has been tested in all sections and has given gen-

eral satisfaction." (Introducer's description.)

We have never fruited this variety, but have a fine, healthy lot of plants that have grown about as introducer claimed.

EARLY SUPERIOR

The Early Superior is a berry of wonderful firmness, with the seeds sticking out on the surface to such an extent that you could dislodge them from the flesh by rubbing hard enough with the fingers. The color is a brilliant red, with varnished appearance, and will hold its shiny appearance for days after being picked. From medium to large in size, providing you keep plants thinned out. Commences ripening early and picks late in the season. Without a doubt there is more of this variety raised in the great berry sections of Delaware than any other variety. They are one of the surest croppers in existence.

SONS PROLIFIC

It is a great producer of glossy, red, large mid-season berries.

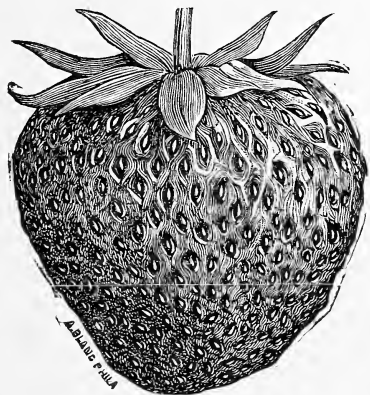

UNKNOWN

We have listed this variety Unknown because we do not know its name. We

know a party who ordered several thousand Chesapeake and supposed they had Chesapeake until fruiting time, when they discovered they had this variety. However, it must have been a grand surprise for the party who had set out those plants, for he had a tremendous crop of fancy berries that his neighbors seemed to think excelled the Chesapeake, and we have no doubt of their thinking so, as we met them personally, and found they had ordered thousands of them instead of Chesapeake, which caused us to lose the sale of thousands of Chesapeake with our old customers. This variety has the qualities, large in size, fine flavored, good shipper, ripening right: fine colored with an exceptionally fine large healthy plant, and late.

SUCCESS

The Success is an excellent early variety, ripening about with the Early Fairfield, large in size, fine flavor, a very bright color, grows a wonderful large stalky plant that makes a good bed of plants. We had more calls than we could fill for this variety last season. There are more of these sold in our State capital than any other variety, and there are also acres of them grown just out of Philadelphia, Pa., which are hauled in to that market in the farmer's wagons.

WILLIAM BELT

It usually makes plants freely that are very large and heavily rooted. It is almost as late as the Gandy. Its color is exceptionally fine. The berries are large. With half a show it seems to mature every berry. As for quality, it is of the finest.

WARREN

A new one from Massachusetts, which has won several prizes at the Horticultural shows. It produces fine crops of beautiful berries, which are large, deep rich red color, of fine quality, and one that will demand top price. The plants are strong, healthy, dark green leathery foliage, entirely distinct from others, making a fine show in the field. We believe it will find a place in the commercial varieties.

UNCLE JIM

Big, large, fine flavored, sweet, fancy berry. One of the finest table berries, moderately firm.

WINNER

This new early variety originated in Pennsylvania. It is very productive, large size, shaped like Haverland, excellent market quality and is a good general purpose berry. Great cropper, beautifully colored. If you want them be sure and order as soon as possible, for we are sure there will not be nearly enough to go around. The more they are seen the greater is the demand for them.

THREE W'S

Very productive; good shipper. Fine color. Fruit is very large. Standard variety. Our plants are extra large and we like their way of growing. If you want one to make a fine show on your table or in the market, with high quality, try this one.

NOTICE

Do it now. Let us have your order as soon as possible, as we always run out of some of the varieties late in the season and will take it for granted that we may be allowed to substitute and will do so with the variety next nearest to the one ordered, unless you order us not to. For instance, we have never any season yet had enough Chesapeakes to fill all orders although we increase the acreage of them each year. Let your orders come, and please send them in as soon as possible, as it helps us wonderfully in calculating how much help to employ. Last season we sold more plants than in any previous year, so please do us the favor to order early, which will be better for all concerned, and we will do our best to please you, and be more likely to get your order filled complete than when ordering late.

Remember: We pack our plants in plenty of live swamp moss freshly dug from nearby swamps at shipping time, and receive lots of letters from our customers all over the United States and as far as Western Canada, of plants arriving in fine condition.

THE STATE OF NEW JERSEY

The Department of Agriculture

Alva Agee, Secretary

Bureau of Statistics and Inspection

Franklin Dye, Chief

No. 65, 1916.

Trenton, N. J., Sept. 1, 1916

This is to certify that we have this 25th day of July, 1916, in accordance with the provisions of Chapter 268, Laws of 1916, State of New Jersey, inspected or caused to be inspected by a duly appointed Inspector the strawberry nursery stock growing in the Garrison nurseries

of J. T. Garrison & Sons, proprietors, at Bridgeton, in Cumberland County, New Jersey and have found the same apparently free from San Jose Scale and other dangerously injurious insect pests and dangerously destructive plant diseases.

This certificate expires June 1st, 1917, and covers only stock actually in the nurseries when examined.

EXPRESS CHARGES are so much lower than before the advent of Parcel Post, and in most cases so much more satisfactory, that we advise ordering by express, as we do when we order plants.

Insecticides and Fungicides

Green Cross Sulpho-Arsenate Powder applied as a dust has been found to be a most efficient material to control the strawberry weevil. In many sections of the country, especially in New Jersey, Delaware and southward, the strawberry weevil destroys from 50 to 75 per cent. of the crop.

The injury is done by the adult females, which puncture the unopened bud of the pollen bearing varieties. This work is followed by the insect almost cutting off the bud stalk some distance below the injured bud.

Green Cross Sulpho-Arsenate kept on the plants as a dust coating during a period of two weeks when the strawberry is most severely attacked, will afford almost a perfect control.

MODIFIED KIL-TONE

Modified Kil-tone should be used to control leaf blight. Its presence is indicated by circular, light colored spots bordered with red. As growth begins in the Spring, spray with Modified Kil-Tone at the rate of 10 pounds to 50 gallons of water; also spray again just before blossoming time. If the bed is an old one, spray as soon as the rows have been cleaned out after the fruit has been picked.

"Kant-Klog" Sprayers Are the Best

This machine demonstrates in one minute its superiority over all others.

Special attention is called to the new Spring Hose Cock, operated either by Lever or Thumb Pin, and starts or stops the spray instantly. Way ahead of the ordinary stop-cock, because it does twice as much work with the same amount of fluid and labor.

The "Kant-Klog" is the only nozzle that can be successfully cleaned without stopping the spray or removing the nozzle from the tree. The first and only nozzle ever made that gives both flat and round sprays or solid streams. With it you can make as many different sizes

and shapes of spray as you could by using all the different styles of nozzles ever made.

Years of experience in the sprayer business and the suggestions offered by thousands of active salesmen have shown us what people want. The Sprayer, Nozzle and Hose Cock all show individuality

and distinct features found in no other line.

Growers have learned that our Style G is the strongest and best Sprayer made, and that the "Kant-Klog" Nozzle Spring Hose-Cock, etc., can be had only on our goods. They also find that with these superior fittings it costs no more than ordinary Sprayers with common fittings.

The Spring Hose-Cock

A very slight pressure starts the spray. Remove it and the spray stops instantly.

Under the old way of using the old style stop-cock and continuous spray more than half the solution was wasted. With the new Spring Hose-Cock you use only enough fluid to each branch, plant or vine.

Besides this great saving in solution you also save half the time formerly spent in charging the sprayer. One charge now lasts twice as long as formerly and covers twice as much foliage.

If a continuous spray is desired a quarter turn of the thumb pin locks and keeps it open and the spray runs continuously until charge is exhausted.

Our new lever attachment can, when desired, be instantly attached to the Spring Hose-Cock and gives the operator his choice of three methods of controlling the spray—by lever, thumb pressure or locking open. If operator becomes tired of one he changes to the other without stopping the work.

The "Kant-Klog" Nozzle

Makes nine sizes of round spray, flat spray and solid streams. Three of each and all of different size, volume and fineness. Suitable for all kinds of work and every solution, including Bordeaux-white-wash, etc., etc., and satisfies the most exacting customers.

Another most important feature is the device for instantly removing any obstructions resulting from not having properly mixed or strained the solutions. This is accomplished without stopping the spray or removing the nozzle from the tree, by simply pressing the end of the nozzle against a limb, the cleaning pin and current doing the work without loss of time or patience. If

you have had experience with the ordinary clogging nozzles you will appreciate this splendid feature. When spraying field crops, etc., the cleaning is done by pressing the rim of the nozzle with the thumb. Notice there is no projecting part to catch on limbs of trees, etc.

Made of heavy polished brass with quarter inch cut threads.

The Sprayer body is made of heavy polished brass or galvanized steel as desired. Top and bottom are dome shaped, joined to a body under heavy pressure, making a complete double seam. The body is supported and further strengthened by a heavy steel band around the bottom. When completed this body is

tested under double the pressure formerly used, so enabling you to get a finer spray for a greater length of time than with any sprayer we have ever made.

No Sprayer will throw a spray of equal fineness farther than this machine will throw it.

The air pump is made of heavy brass two inches in diameter. Hose couplings are solid brass, standard cut threads, ends heavily ribbed to prevent hose slipping off. Hose is high grade, three-ply, supported by a coiled spring, bell shaped at outer end to prevent breaking. A safety valve is provided to allow air to escape after the necessary pressure has been obtained. The "Kant-Klog" nozzle furnished with this machine without extra charge, makes two bell sprays of different size, volume and fineness; one flat spray and two sizes of straight streams. The thumb pressure Spring Hose-Cock shown above is also furnished with Style G without extra cost. Sprayer holds between four and five gallons and can be carried either by carrier strap or air pump handle.

Price of Style G, as described above, with galvanized steel body, brass air pump, hose, escape valve, "Kant-Klog" nozzle, thumb pressure Spring "Hose Cock" and carrier strap. \$5.25

Polished brass body with same attachments, \$7.55

Lever for use with Spring Hose-Cock, 15c

DIRECTIONS

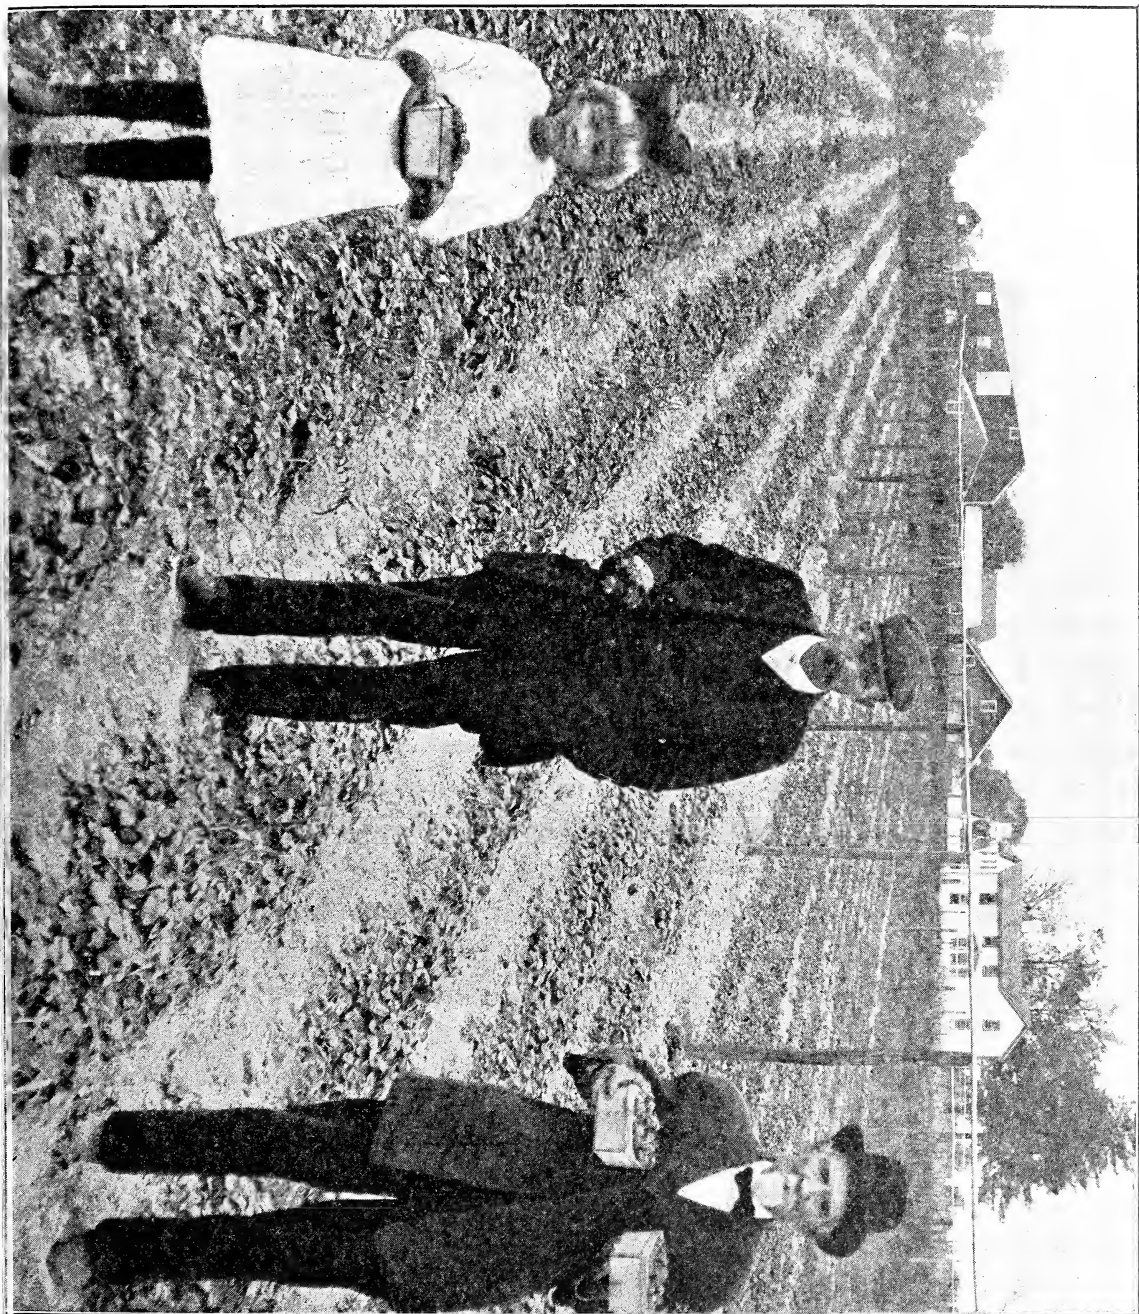

A few seconds working of the air pump thoroughly agitates the solution and charges the sprayer with compressed air. This being a very powerful and elastic force will, as soon as the thumb presses the "shut-off" force out the liquid in the form of either a spray or a solid continuous stream as desired. After sprayer is charged you need not stop for anything; just walk along from one row to another, the machine will supply sufficient spray to enable you to do work as fast as you can walk. The great saving in time, labor and solution even on small sprayings will more than pay for this splendid machine the first month it is used, to say nothing of the big increase in crops as a result of spraying properly.
